

UKRAINIAN CHAMBER OF COMMERCE IN JAPAN

The UCCJ was established with the objectives of providing a forum for Japanese and Ukrainian companies to grow and cooperate together in various fields such as IT, industry, and agriculture. We want to support the economic development of both countries through trade promotion as well as cultural and technological exchange.

Services

UCCJ can

provide for

Ukrainian

and Japanese

businesses

Market Research

- ✓ Report about local market trends, competitive analysis and industry trends
- ✓ Research on the behavior and needs of target consumer groups
- ✓ Provide risk assessment and opportunity analysis when entering the market
- ✓ Provide information on local business culture and practices

Business Matching

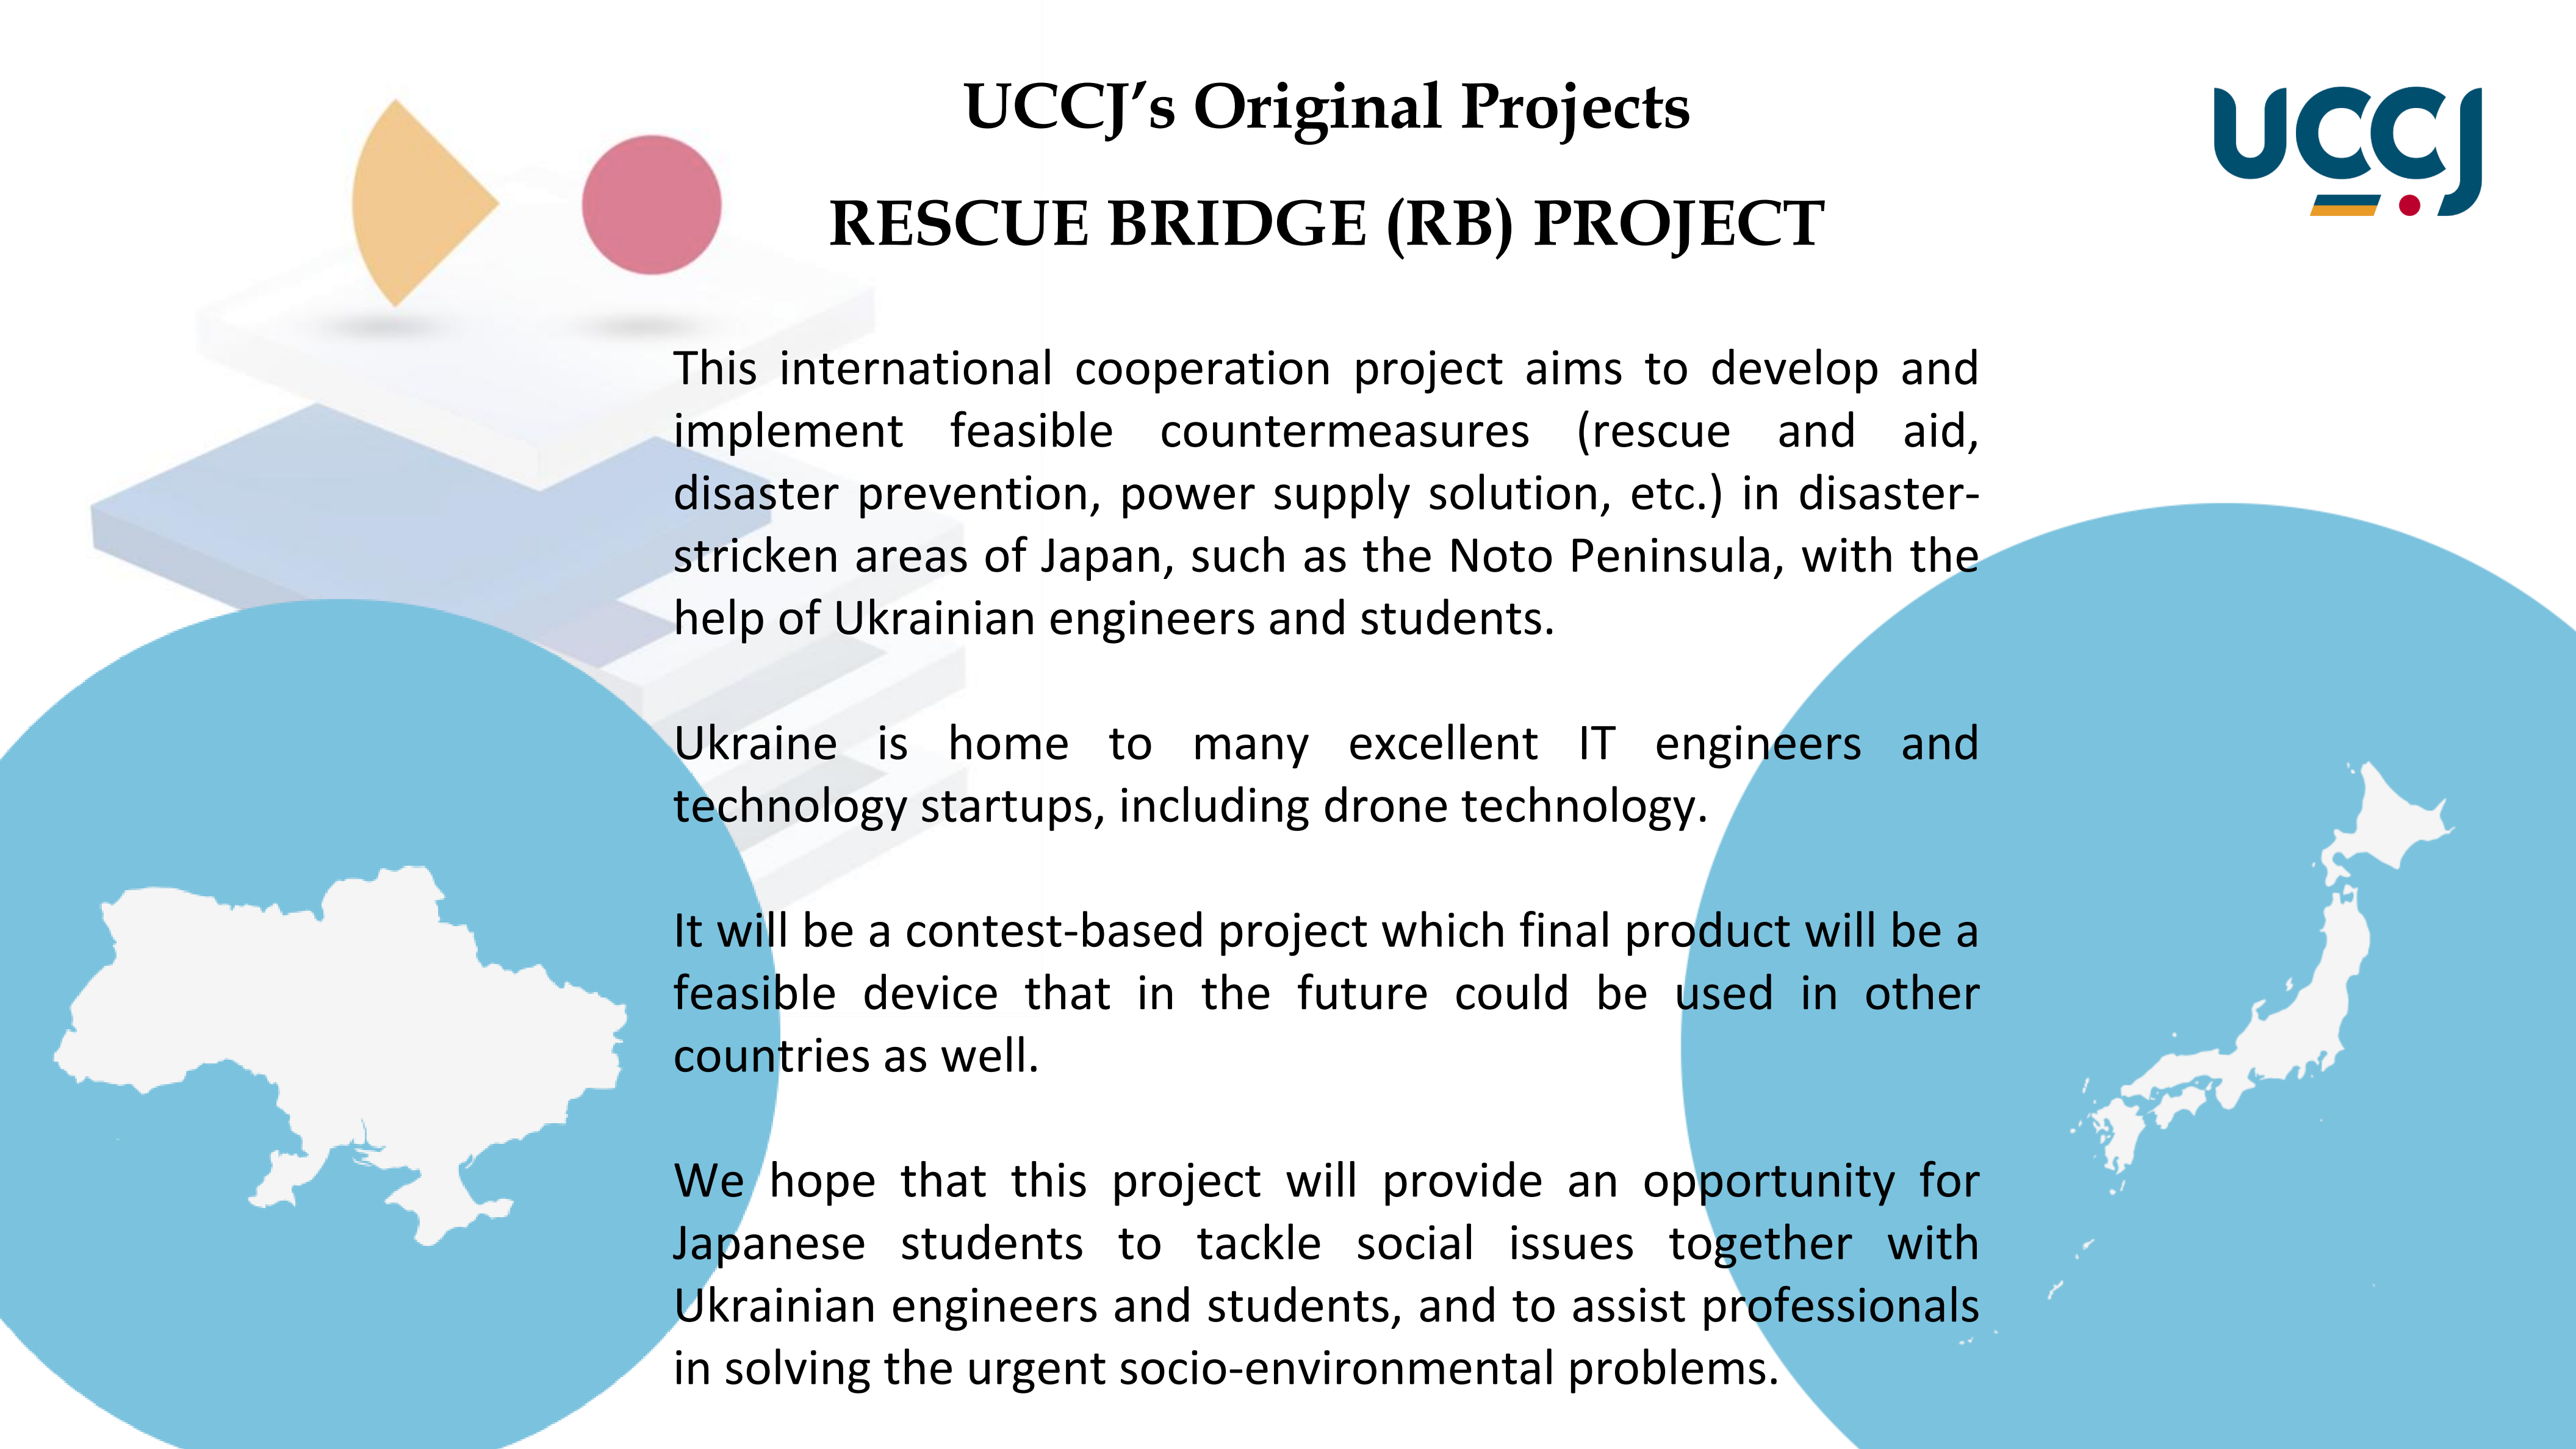

- ✓ List and introduce to local partner companies and suppliers
- ✓ Support for hosting and participating in business matching events and networking events
- ✓ Arrange initial negotiations and interviews with potential partners
- ✓ Support for adjusting expectations and building consensus

Legal and Tax Support

- ✓ Assist with local incorporation procedures
- ✓ Draft contracts based on local law and review existing legal documents
- ✓ Provide support with local tax authorities for registration and tax return filing
- ✓ Provide information and suggest solutions on the latest tax laws and regulations in Ukraine and Japan

UCCJ's Original Projects

RESCUE BRIDGE (RB) PROJECT

The background features several decorative elements: a large blue circle on the left containing a white map of Ukraine; a large blue circle on the right containing a white map of Japan; a large light blue arrow pointing right, partially obscured by the text; and a white 3D-style arrow pointing right, also partially obscured. At the top left, there are two overlapping shapes: a yellow triangle and a pink circle.

This international cooperation project aims to develop and implement feasible countermeasures (rescue and aid, disaster prevention, power supply solution, etc.) in disaster-stricken areas of Japan, such as the Noto Peninsula, with the help of Ukrainian engineers and students.

Ukraine is home to many excellent IT engineers and technology startups, including drone technology.

It will be a contest-based project which final product will be a feasible device that in the future could be used in other countries as well.

We hope that this project will provide an opportunity for Japanese students to tackle social issues together with Ukrainian engineers and students, and to assist professionals in solving the urgent socio-environmental problems.

Unleash your business
potential with UCCJ
