

Project for Development of the Construction Equipment Operator Training Centre

ACHIEVEMENTS

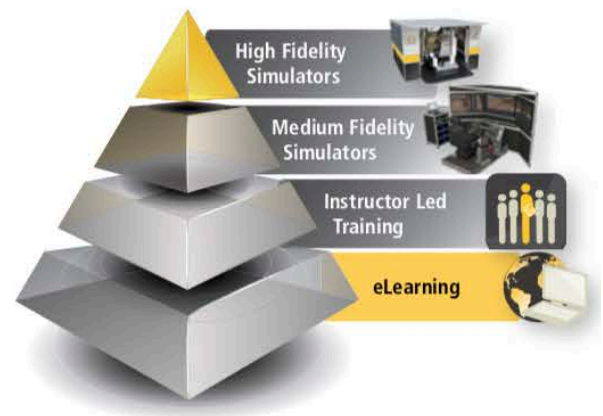

- UNIDO commissioned an eLearning module for the Komatsu GD663A-2 motor grader, one of the most crucial road construction machines operated by the Ministry of Works and Transport (MoWT) and District Local Governments (DLG) staff that will be trained by this project. The aim of the eLearning is to provide an opportunity for operators to deepen their knowledge despite current restrictions on in-person training in Uganda. It will provide an opportunity for operators to learn 5 modules (machine familiarization; machine inspection and reporting procedures; operating procedures and equipment maintenance; machine safety and emergencies; and operating techniques) at their own pace and complements the simulators and in-person training.
- UNIDO received the scoping document for the eLearning modules and shared them with Komatsu Nairobi and MoWT for feedback. Feedback was provided by Komatsu Nairobi and MoWT and has been incorporated in the scoping document.
- UNIDO interviewed all candidates for the Administrative and Financial Assistant position. A candidate has been selected.
- UNIDO interviewed all candidates for the Construction Equipment Master Trainer role. After the interview, it has been decided to continue the interviews to find a suitable candidate.
- UNIDO continued the works on the floor plan for the training centre.

PLANNED ACTIVITIES IN OCTOBER 2020

- MoWT will arrange a formal handover of the land to UNIDO so that the construction works can commence. Immediately after receiving the notification from MoWT that the land can be used, UNIDO will authorize the start of the topographic survey for seven days, to be followed by the geotechnical analysis and report for thirty days, including a laboratory test.
- MoWT will sign the Terms of Use (ToU) for the Komatsu WA250-5 wheel loader simulator from Komatsu/Immersive Technologies to enable the vendor to ship the item.
- UNIDO will share the revised scoping document for the Komatsu GD663A-2 motor grader eLearning modules with Komatsu Nairobi and MoWT for a final round of feedback.
- The UNIDO Project Coordinator will meet the project partners in person in Kampala to update them on the project's progress.
