

SCREW TYPE HYDROPOWER GENERATOR

A compact hydro power generator.

It is an environmentally friendly device that can continuously generate power if there is a water source day and night.

The generated power can be used for self-consumption or grid connection. (Proven experience in overseas projects)

Features

- (1) Abundant amount of water is advantageous for middle and low head condition
- (2) Easy installation work
- (3) Easy and inexpensive handling and maintenance

Specification

- (1) Power generation capacity: 5kW(Maximum)
- (2) Type of generator: Screw with water pipe
- (3) Outer diameter of turbine: ϕ 694mm
- (4) Generator: 7.5kW
Permanent magnet synchronous generator
- (5) Number of water wheel row: 2-row type
(standard)
- (6) Generating voltage : AC200V, 50/60Hz
- (7) Equipment dimensions: W1630x L2630x H1650mm, Weight: 1100kg
- (8) Control box: W1000×D500×H2000mm

Screw type in operation
